TURKISH FOUNDRY ASSOCIATION

(TÜDÖKSAD)

TÜDÖKSAD in Brief

Turkish Foundry Association (TÜDÖKSAD) is founded in 1976 by leading foundry industrialists and companies with the aim of providing support to enhance the economic progress of the metal casting industry and assisting its member companies to effectively manage all production operations and profitably market their products and services.

TÜDÖKSAD is a non-governmental organization with voluntary membership, which represents the leading firms, industrialists and managers of the foundry business. Our Association, covering all of the largest foundries and most of the SMEs as our members, have 130 member foundries and 49 associate members.

Turkish foundry sector is actively represented by TÜDÖKSAD in national and international platforms. TÜDÖKSAD promotes the interests of the metal casting industry in front of the related executive branches of the government. TÜDÖKSAD members are actively participating to sectional committees and decision making bodies in national chambers of commerce and industry, hence contributing to the shaping of the national policies and priorities affecting the foundry industry.

TÜDÖKSAD is a member of the World Foundry Organization (WFO) since 1989 and became a member of The European Foundry Association (CAEF), the organization union of the European foundry industry, in 2007. TÜDÖKSAD supports the biannual Ankiros, Annofer, TurkCast and Aluexpo fairs.

WE ADD VALUE TO METALS!

Turkish metal casting industry acts an important role in world casting production, as well as in Europe. According to the American Foundrymen Society 55th Census of World Casting Production, Turkey has taken 2nd place in Europe and 9th place in global in 2020.

In 2021, Turkish Metal Casting Industry had another bright period with the effect of increasing orders and production. While foundries increased their equipment and technology investments throughout the year, it was noted that approximately 50 percent of the investments made were for capacity increase. According to the preliminary results from 2021 datas, it turns out to an increase of around 30 percent in total casting production, 30-35% increase in iron and steel castings, and 5-10% in non-ferrous castings. Total production statistics will be published on the TÜDÖKSAD website (<https://www.tudoksal.org.tr/>) in the following days. Turkish Foundry Industry has the ability to meet all demands in a short time and in every sense, through the deep industrial background. There are nearly 1000 foundries operating in the country that covering various business models such as high-volume production foundries with state-of-the-art automatic molding lines, big part manufacturing up to maximum tonnages in single part with available flask sizes and jobbing foundries serving different industries precisely with ready-to-assembly component production.

Turkish Metal Casting Industry Production Datas (Tons)

Advanced Technical Capabilities

Turkish foundries make use of latest design, simulation and ERP softwares to achieve highest productivity, process reliability and control over all processes.

All the fingerprints of processes are stored to ensure traceability, to be used in certification procedures and process development and correspondingly most of the foundries implement lean production principles.

The versatility of the Turkish Metal Casting Business could be demonstrated by the number of casting and molding processes available that match with every specific expectation such as high surface quality and dimensional accuracy, different pattern types/corebox equipments, machining facilities and secondary processes.

In the current period, that efforts for adaptation to climate change, sustainable production, protection of natural resources and reduction of carbon footprint are on the top of the agenda, the consumers and the manufacturers become more environmentally responsible as the demand grows for green initiatives.

Metal casting foundries are increasingly implementing eco-friendly manufacturing processes and sustainable product options towards EU Green Deal and in their Sustainable Production Strategic Road Maps. Also, nearly 30 foundries have got R&D Center Certificate by the Ministry of Science, Industry and Technology so far under the new regulation, which aims to improve University-Industrial Research Collaboration and offers the opportunity of realizing funded research studies and taking part in EU Horizon projects and other

programmes as well. The focus is on innovations and technologies that contribute to the environment as well as energy efficiency and efficiency of resources.

Turkish Metal Casting Industry Exports (Tons)

Adapting to the New Challenges

Turkish foundries update their business models accordingly with the latest innovations and technological breakthroughs in line with the environmental regulations and Sustainable Production Strategic Road Maps. This enables them to develop their own solutions in a widest range for the customers, also with offering rapid prototyping, additive manufacturing, in-house pattern making services and faster NPI mechanisms. Products supplied at favorable prices, coupled with simultaneous engineering, just in time delivery, prompt reaction to design changes and flexibility are the principal priorities for the further growth of Turkish foundry industry in the global market place in the coming decades.

Vocational Training Activities & Foundry Congresses

As TÜDÖKSAD, to bring the young and dynamic labor force potential to the industry, we have focused on vocational training activities in the recent period. Since 2015, under the name of Tüdöksad Academy, we have been organizing monthly training activities and annual foundry congresses (National & International) which aims to improve the knowledge of foundrymen and attract young people. Due to the Covid-19 pandemic that emerged at the beginning of 2020 and the ongoing process, we have been carrying out our vocational training activities through online platforms since March 2020. The last edition of Turkish National Foundry Congress has been held successfully on 30th November - 1st December 2019 in Izmir Swissotel with more than 500 participants. Under the motto "Sustainable Innovation in the Foundry Industry", in total, 40 oral presentations were performed in 6 sessions and 2 panels (Youth & Additive Manufacturing) during the Congress, as well as with the poster session.

11th International Foundry Congress “Let’s Talk The Future of Casting”

We are looking forward to welcome foundrymen from all over the world in the 11th International Foundry Congress, to be held between 6 - 8 October 2022, concurrently with Ankiros / Turkcast fairs. Congress Programme is going to be announced in the following days through the social media channels and web page. The International Foundry Congress is a globally known and prestigious technical event that constitutes a perfect occasion for exchanging knowledge and experiences, the newest achievements and innovations. As Turkish Foundry Association, our aim is to provide a platform that casting producers, researchers, R&D centers, students, customers and suppliers would be in communication on an international scale. In addition, the online education platform "Dokumhane.net", which we have been directing the content production and promotional activities since the beginning of 2019, offers free educational materials and short interviews with young metal casters that presents the foundry industry to the students interested in casting. We plan to continue these activities in the coming period.
